SUMMARY

Software Development Specialist (Senior Software Engineer) and Acting Software Architect with 11+ years at Amdocs designing and delivering scalable, cloud-native backend platforms for global telecom clients including Telstra and AT&T. Deep expertise in Java, Spring Boot, microservices, REST APIs, API Gateway design (APIGEE), event-driven architecture (Kafka), Kubernetes (EKS/AKS), Docker, AWS, and Azure. Proven record in system design, architecture modernization, cloud migration, and security hardening, including a 40% infrastructure cost reduction. Mentored 22 developers and led critical incident resolution on mission-critical telecom systems. Currently serving as AI Agent Reliability Lead, driving the design, evaluation, and reliability of AI agents and agentic workflows (LLMs, MCP) for enterprise adoption.

WORK EXPERIENCE

Amdocs Gurugram, India
Software Development Specialist (Acting Software Architect) Oct 2015 - Present
Career Progression: Software Engineer (2015-2016) -> Advanced Software Engineer (2016-2019) -> Senior Software Engineer / Software Development Specialist (2019-Present)

Architecture & Design

- Lead solution architecture, technical elaboration, and architectural planning for complex initiatives, applying system design principles to deliver scalable solutions aligned with client requirements.
- Author Architecture Decision Records (ADRs) and architecture artefacts documenting design rationale and trade-offs, supporting knowledge transfer and cross-team alignment.
- Applied event-driven architecture with Kafka to support asynchronous, high-volume order processing workflows.
- Contributed to API Gateway design and traffic management strategy using APIGEE, standardizing secure service exposure for enterprise telecom APIs.
- Modernized legacy monolithic applications into cloud-native Java/Spring Boot microservices using REST APIs, Docker, Kubernetes, and Helm.
- Supported large-scale cloud transformation, including AWS to Azure migration, adapting microservices for Azure Kubernetes Service (AKS).

Cloud, Performance & Security

- Optimized AWS Graviton-based architecture using multi-architecture Docker images, achieving 40% infrastructure cost reduction.
- Integrated Elastic on Kubernetes (ECK), reducing AWS managed service costs by a further 20% while improving deployment efficiency.
- Supported System Verification Testing (SVT) and backend optimization initiatives that improved application performance by 30%.
- Remediated 80% of vulnerabilities identified across Docker containers, Kubernetes (EKS) environments, and application code scans (Veracode, Sonar).

Leadership & Delivery

- Mentored and guided a team of 22 developers through technical leadership, code reviews, and knowledge sharing.
- Led resolution of critical development and production incidents, providing advanced troubleshooting for enterprise telecom applications.
- Serve as AI Agent Reliability Lead, designing and validating AI agents, personas, and agentic workflows (LLMs, MCP) to improve reliability, safety, and adoption of enterprise AI.

SKILLS

Architecture & Design: Solution Architecture, System Design, Microservices Architecture, Event-Driven Architecture, API Gateway Design, Architecture Decision Records (ADRs), Cloud-Native Architecture, Legacy Modernization, Cloud Migration (AWS to Azure)

Languages, Frameworks & APIs: Java, SQL, Spring Boot, Spring Framework, Spring JPA, Spring Cache (EhCache), REST APIs, Web Services

Cloud, Container & Platform: AWS, Microsoft Azure, Kubernetes (AKS/EKS), Docker, Helm, Azure Container Registry (ACR), AWS Graviton, Elastic on Kubernetes (ECK)

Data & Integration: Kafka, APIGEE, OKAPI, PostgreSQL, Oracle, MySQL

DevSecOps & Observability: CI/CD (Jenkins, Bamboo), Git, Perforce, Veracode, Sonar, New Relic, Dynatrace, Splunk, JIRA, Octane, DevSecOps Practices

AI & Developer Productivity: AI Agents, AI Agent Reliability, MCP Development, LLM-based Development Workflows, Persona Design, Prompt Engineering, Cursor

PROJECT EXPERIENCE

Order Decomposition Orchestration (ODO) Jun 2017 - Present
Client: Telstra, Australia
Organization: Amdocs
Technologies: Java, Spring Boot, Spring JPA/EhCache, Microservices, AWS, Microsoft Azure, Docker, Kubernetes, Helm, MySQL, PostgreSQL, APIGEE, PowerMockito, JIRA
Key Responsibilities:

- Led cloud migration of order orchestration microservices from AWS to Microsoft Azure with minimal downtime for mission-critical telecom services.
- Re-architected Java/Spring Boot microservices and REST APIs for AKS using Docker containerization and Helm-driven deployments.
- Designed scalable microservices business logic and APIGEE API Gateway integrations supporting high-volume telecom order processing.
- Migrated monolithic/WebLogic workloads to cloud-native Kubernetes, improving scalability and deployment agility while remediating 80% of identified vulnerabilities.
- Provided production support for UAT and live environments: critical incident resolution, defect triage, and high availability.
- Partnered with QA, DevOps, and client stakeholders to stabilize post-migration environments and optimize cloud performance.

Amdocs Store Ordering and Activation Platform (ASAP) Oct 2015 - May 2017
Client: AT&T, US
Organization: Amdocs
Technologies: Core Java, Spring Framework, Maven, MySQL, PL/SQL, HTML, CSS, Selenium WebDriver
Key Responsibilities:

- Designed and enhanced application features using Core Java and Spring Framework based on business requirements.
- Integrated and enhanced application interfaces across CRM and dealer channels, supporting seamless business process integration.
- Resolved defects across enterprise applications, improving stability and performance.
- Automated repetitive tasks with Java and Selenium WebDriver, improving operational efficiency by 20%.
- Delivered knowledge transfer (KT) to onshore teams to ensure project continuity.

KEY ACHIEVEMENTS AND RECOGNITIONS

- Resolved critical production issues during deployments in Australia and Mexico, earning multiple Client Appreciations.
- Created an Automated Time Tracking Tool deployed organization-wide; recognized with Spotlight Award, Certificate of Appreciation, Innovator of the Year, and Employee of the Month.
- Built an Automated Follow-Up Tool (Java, Selenium WebDriver) that reduced manual work, earning client and internal recognition.
- Built the Defect Data Count Manager (DDCM) to track defect resolution metrics and streamline team collaboration.
- Selected among top entries in the Amdocs India Hackathon and showcased to clients; represented the organization in the Global Hackathon.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)

EDUCATION

PGDM Executive in Technology & Operations Management Jan 2020 - Jan 2021
Maharashtra Institute of Technology School of Distance Education (MIT-SDE), Pune

Bachelor of Engineering in Computer Science & Engineering Apr 2011 - Apr 2015
Lakshmi Narain College of Technology, Bhopal
