SUMMARY

Software Development Specialist with 11+ years of experience designing and delivering scalable cloud-native, backend, and microservices-based solutions for global telecom clients including AT&T and Telstra. Strong expertise in solution architecture, Java, Spring Boot, REST APIs, Kubernetes, Docker, AWS, and Azure, with hands-on experience driving cloud migration, architecture modernization, and containerized deployment environments. Currently serving as AI Agent Reliability Lead, driving the design, evaluation, and reliability of AI agents, personas, and automated workflows (LLMs, MCP) to advance enterprise AI adoption. Proven track record of delivering scalable and secure enterprise systems, optimizing infrastructure costs by up to 40%, and supporting high-availability production platforms. Recognized for architectural planning, technical leadership, critical incident resolution, and collaboration across Agile cross-functional teams to deliver mission-critical telecom solutions.

WORK EXPERIENCE

Amdocs

Gurugram, India

Software Development Specialist

Oct 2015 - Present

Career Progression: Software Engineer (2015-2016) -> Advanced Software Engineer (2016-2019) -> Senior Software Engineer / Software Development Specialist (2019-Present), currently functioning as Acting Software Architect

- Serving as AI Agent Reliability Lead, designing and validating AI agents, personas, and automated agentic workflows to improve reliability, safety, and adoption of enterprise AI systems.
- Led solution architecture, HLD/LLD preparation, technical elaboration, and architectural planning for complex development initiatives, delivering scalable solutions aligned with business and client requirements.
- Provided architectural guidance and technical leadership to a team of 22 developers through design reviews, code reviews, and knowledge sharing initiatives.
- Led resolution of critical development and production incidents, providing architectural troubleshooting and technical direction for enterprise telecom platforms.
- Designed and implemented scalable cloud-native backend solutions using Java, Spring Boot, REST APIs, Microservices, Docker, and Kubernetes supporting high-volume telecom systems.
- Optimized AWS Graviton-based cloud architecture using multi-architecture Docker images, achieving 40% infrastructure cost reduction.
- Integrated Elastic on Kubernetes (ECK) capabilities, reducing AWS managed service costs by an additional 20% while improving deployment efficiency.
- Strengthened system security and compliance by remediating 80% of vulnerabilities identified across Docker containers, Kubernetes environments (EKS), and application code scanning tools.
- Led modernization of legacy monolithic applications into cloud-native microservices architecture using Kubernetes, Helm, and containerized deployment models.
- Supported System Verification Testing (SVT) and backend optimization initiatives, delivering solutions that improved application performance by 30%.
- Delivered technical documentation and architecture artefacts to support solution clarity, knowledge transfer, and effective cross-functional collaboration.
- Led and supported cloud transformation and solution modernization initiatives, including AWS-to-Azure migration and microservices deployment on Azure Kubernetes Service (AKS).

SKILLS

Architecture & Design: Solution Architecture, System Design (HLD/LLD), Cloud-Native Architecture, Microservices Architecture, API Gateway (APIGEE), Container Orchestration, Cloud Migration

Programming Languages and Frameworks: Java, SQL, Spring Boot, Spring Framework, REST APIs, Spring JPA, Spring Cache (EhCache), Web Services, Microservices

Cloud, Container & Platform Technologies: AWS, Microsoft Azure, Kubernetes (AKS/EKS), Docker, Helm, Azure Container Registry (ACR), AWS Graviton, Elastic, Elastic on Kubernetes (ECK)

Data, Integration & DevOps Tools: PostgreSQL, Oracle, Kafka, APIGEE, OKAPI, Jenkins, Bamboo, CI/CD Pipelines, Git, Perforce

Quality, Monitoring & Collaboration Tools: Veracode, New Relic, Sonar, Dynatrace, Splunk, JIRA, Octane, DevSecOps Practices

AI & Developer Productivity Tools: Cursor, LLM-based Development Workflows, MCP Development, AI Agents, AI Agent Reliability, Persona Design, Prompt Engineering

PROJECT EXPERIENCE

Order Decomposition Orchestration (ODO)

06/2017 - Present

Client: Telstra, Australia

Organization: Amdocs

Technologies: Java, Spring Boot, Spring JPA/EhCache, Microservices, AWS, Microsoft Azure, Docker, Kubernetes, Helm, MySQL, PostgreSQL, PowerMockito, JIRA, APIGEE

Key Responsibilities:

- Led cloud migration and architecture modernization of order orchestration microservices from AWS to Microsoft Azure while ensuring continuity of mission-critical telecom services.
- Re-architected Java and Spring Boot microservices and REST APIs for Azure Kubernetes Service (AKS), defining scalable cloud-native deployment architecture using Docker and Helm.
- Designed and enhanced scalable microservices-based business logic supporting high-volume telecom order processing for Telstra.
- Migrated workloads from monolithic and WebLogic-based architecture to cloud-native Kubernetes platforms, improving system scalability and deployment agility.
- Strengthened platform security by remediating up to 80% of vulnerabilities identified across container images, Kubernetes clusters, and application code.
- Provided production support for UAT and live environments, resolving critical incidents, performing defect triage, and ensuring high system availability.
- Collaborated with cross-functional teams including QA, DevOps, and client stakeholders to stabilize post-migration environments and optimize cloud performance.

Amdocs Store Ordering and Activation Platform (ASAP)

10/2015 - 05/2017

Client: AT&T, US

Organization: Amdocs

Technologies: Core Java, Spring Framework, Maven, MySQL, PLSQL, HTML, CSS, Selenium WebDriver

Key Responsibilities:

- Designed and enhanced application features using Core Java and Spring Framework based on business and user requirements.
- Integrated and enhanced application interfaces across CRM and dealer channels, supporting seamless business process integration.
- Performed troubleshooting and defect resolution across enterprise applications, improving application stability and performance.
- Automated repetitive tasks using Java and Selenium WebDriver, boosting operational efficiency by 20%.
- Provided training (KT) and knowledge transfer to onshore teams to ensure project continuity.

KEY ACHIEVEMENTS AND RECOGNITIONS

- Solved critical production issues during deployments in Australia and Mexico, ensuring consistent system performance and earning multiple Client Appreciations.
- Innovated an Automated Follow-Up Tool using Java and Selenium WebDriver, reducing manual work and improving process efficiency, earning client and internal recognition.
- Built the Defect Data Count Manager (DDCM) to track defect resolution metrics, streamlining team collaboration and enhancing productivity.
- Created an Automated Time Tracking Tool for process optimization contributions, deployed organization-wide, recognized with a Spotlight Award, Certificate of Appreciation, Innovator of the Year and Employee of the Month.
- Participated in the Amdocs India Hackathon, where an innovative automation tool was selected among the top entries and showcased to clients.
- Represented the organization in the Global Hackathon, presenting customer acquisition solutions for video hosting services.

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)

EDUCATION

PGDM Executive in Technology & Operations Management

01/2020 - 01/2021

Maharashtra Institute of Technology School of Distance Education (MIT-SDE), Pune

Bachelor Of Engineering in Computer Science & Engineering

04/2011 - 04/2015

Lakshmi Narain College of Technology, Bhopal
